

Strategic Development Partnership with Data Integration Solution Provider

The client is a global integration and data management company offering products, services and cloud-based solutions for data integration, data management, data security, data transformation and data harmonization.

OFS started the relationship with this client more than 10 years ago and is now a trusted development partner. We have successfully delivered more than 15 major projects. The projects include technology selection, architecture enhancement, UI development, mobile app development, integration needs and performance improvements. In addition, OFS provides value addition through evangelizing new tools, processes and practices for quality deliverables.

Business Benefits:

- We have been a successful development partner for more than 10 years and helped the client be a leader in data integration platforms.
- We re-engineered the client's platform with the latest technologies that could support expectations for performance, scalability, configurability and easy maintenance.

Key Projects

❑ Next-Generation Data Integration Platform

- Developed a cloud-based, multi-tenant data integration and transformation platform by implementing microservices-based architecture with extensive configuration and integration capabilities

❑ Mobile Health Check

- Developed a mobile app that helps patients on post-discharge services and helps hospitals and healthcare providers identify potential health issues before patient re-admission

❑ Data Transformation Tool (ETL Tool)

- Developed a data transformation and reconciliation tool for exchanging data with sophisticated code generation capabilities that automate industry-standard Java or XSLT code generation from logical maps and specific code generators

❑ Content Management System

- Re-engineered the centralized content management system by migrating its 2-tier architecture into n-tier architecture to fit the client's business needs

Technologies

- Java, JavaScript, AngularJS, Bootstrap, HTML, Objective-C, Vert.x, ELK, REST API, Active Directory, HornetQ, Tomcat, Gradle, Jenkins, Oracle and Linux
